

EXERCISE – 3B

NAME : Tanisha.S

ROLL NO : 240701553

WIREFLOW PROTOTYPE DESIGN

AIM:

The aim of this exercise is to design a wireflow prototype that demonstrates the navigation flow between different application screens using Wireflow. The prototype visually represents how users move between screens such as Sign Up, Forgot Password, Feeds, Comments, Profile, User Settings, and Connection.

TOOLS USED:

- Wireflow (<https://wireflow.co/>)
- Basic UI / UX design concepts

PROCEDURE:

Step 1: Planning the Prototype

- Identified the main screens required for the application such as Sign Up, Forgot Password, Feeds, Comments, Profile, User Settings, and Connection.
- Planned a logical navigation flow showing how the user moves between these screens.

Step 2: Creating Wireflow Project

- Logged into the Wireflow platform.
- Created a new project for designing the prototype.

Step 3: Designing Screens

1. Sign Up Screen

- Designed a registration interface for new users.
- Included form placeholders for user details.

2. Forgot Password Screen

- Created an interface allowing users to recover their password.
- Added input fields and reset option.

3. Feeds Screen

- Designed a feed layout where users can view content posts.
- Added placeholders for images and text content.

4. Comments Screen

- Created a section where users can view and post comments.
- Included profile icons and comment placeholders.

5. Profile Screen

- Designed a user profile layout with user information and profile image.

6. User Settings Screen

- Added interface elements representing settings options and toggles.

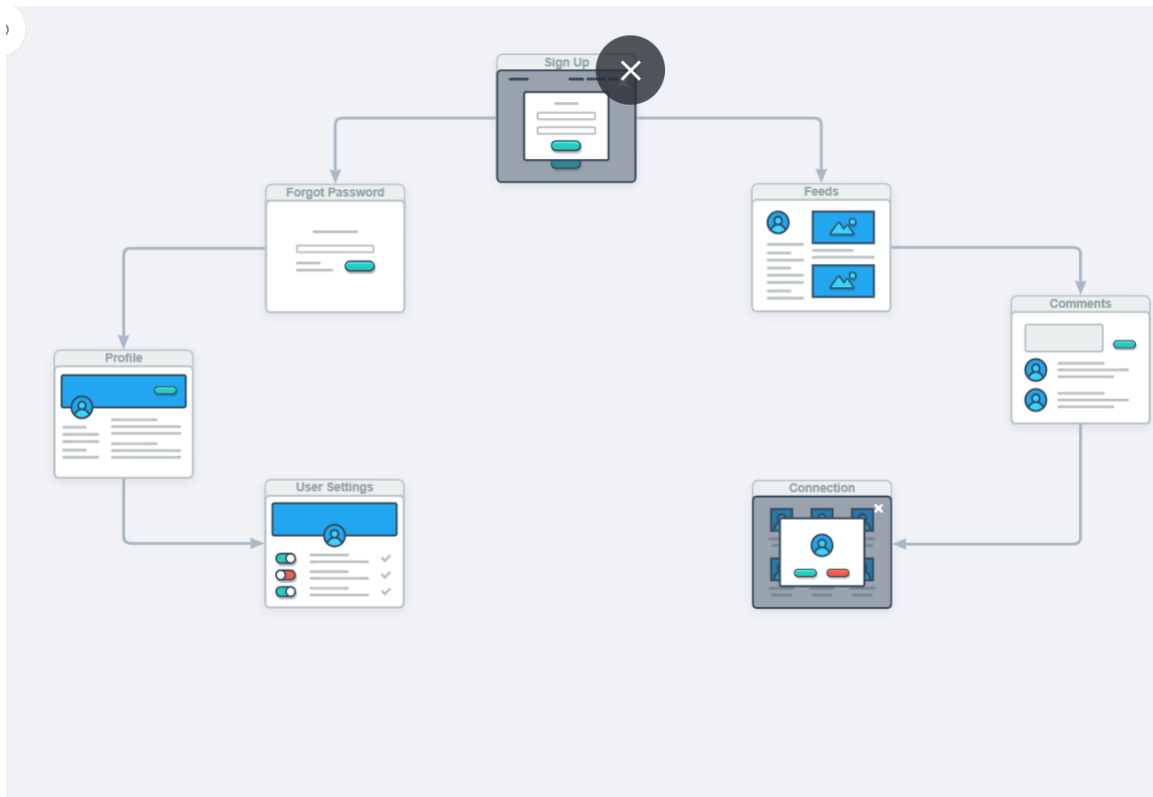

7. Connection Screen

- Created a screen showing user connection or interaction options.

Step 4: Linking Screens (Wireflow)

- Connected all screens using arrows to represent navigation flow.
- Example navigation flow:
 Sign Up → Feeds → Comments → Connection
 Sign Up → Forgot Password → Profile → User Settings
- Ensured the flow clearly represents how a user navigates through the application.

Wireflow Prototype Diagram

RESULT:

A wireflow prototype was successfully created showing the navigation between different application screens such as Sign Up, Feeds, Comments, Profile, User Settings, and Connection. The diagram clearly represents the user flow and interaction between the screens.

CONCLUSION:

The wireflow prototype successfully demonstrates a clear navigation structure between multiple screens in the application. It helps in understanding the user journey and improves the planning of the interface before development.
