College	Rajalakshmi Engineering College
Course	UI/UX Design
Exercise No.	5a
Date	08 April 2026

EXERCISE No. 5a

Simulate the Lifecycle Stages for UI Design using the RAD Model and Develop a Small Interactive Interface using Axure RP

AIM

To demonstrate the lifecycle stages of UI design using the RAD (Rapid Application Development) model and develop a small interactive interface employing Axure RP.

PROCEDURE

Tool Used: Axure RP | Tool Link: <https://www.axure.com/>

Simulating the Lifecycle Stages for UI Design Using the RAD Model

The RAD (Rapid Application Development) model emphasizes quick development and iteration. It consists of the following phases:

Phase 1: Requirements Planning

- Gather initial requirements and identify key features of the UI.
- Engage stakeholders to understand their needs and expectations.
- Key features identified: Navigation (Home, Product Categories, Product Details, Cart, Checkout, Order Confirmation, Order History).
- User actions: Browsing, Searching, Adding to Cart, Checkout, Tracking Orders.

Phase 2: User Design

- Create initial prototypes and wireframes using Axure RP.
- Conduct user feedback sessions to refine the designs.
- Install and launch Axure RP from the official website (<https://www.axure.com/>).
- Create a new project: Go to File -> New, name it 'Shopping App Interface'.

- Design wireframes for each screen: Home Page, Product Categories, Product Listings, Product Details, Cart, Checkout.
- Add interactions using the Properties panel (e.g., OnClick to navigate between screens).
- Create reusable Masters (headers, footers) and add annotations.

Phase 3: Construction

- Convert wireframes into interactive prototypes by adding interactions and transitions.
- Use dynamic panels to create interactive elements such as carousels and pop-ups.
- Preview the prototype using the Preview button.
- Gather feedback from users and stakeholders, then iterate and refine accordingly.

Phase 4: Cutover

- Finalize the design and interactions.
- Export the prototype as an HTML file or share it via Axure Cloud.
- Conduct user training sessions and provide documentation for any support needs.

RESULT

The interactive interface for the Shopping App was successfully developed using Axure RP by simulating the RAD model lifecycle stages. The prototype covers five key screens — Home, Categories, Product Details, Cart, and Checkout — with interactive navigation buttons and dynamic links between pages. The following screenshots show the output screens created:

Screen 1: Home Page

The Home Page includes a 'Shopping App' title, a search bar for products, a 'View Categories' button navigating to the categories page, and a 'Go to Cart' button for quick cart access.

Fig 1: Home Page - Shopping App Interface

Screen 2: Categories Page

The Categories page displays three product categories: Electronics, Clothes, and Shoes, each as interactive buttons. A 'Back to Home' button allows navigation back to the Home Page.

Fig 2: Categories Page

Screen 3: Product Details Page

The Product Details page shows a product image (Shoes), its name and price (\$100), an 'Add to Cart' button, and a 'Back' button to return to the previous screen.

Fig 3: Product Details Page

Screen 4: Cart Page

The Cart page displays the selected product (Shoes at \$100) with the total amount. It includes a 'Checkout' button to proceed and a 'Back' button to continue shopping.

Fig 4: Cart Page

Screen 5: Checkout Page

The Checkout page collects the user's Name, Address, and Payment Method (Cash, Card, or UPI via radio buttons). A 'Place Order' button confirms the order and a 'Back' button returns to the cart.

The image shows a mobile app checkout screen. At the top, the word "Checkout" is centered in a bold, italicized, black serif font. Below it are three input fields: "Name: xxx", "Address:", and "Payment Method:". The "Payment Method:" field has three radio button options: "Cash", "Card", and "UPI". At the bottom, there are two blue buttons with white text: "Place Order" and "Back". Each button has a small yellow lightning bolt icon in its top right corner. The entire screen is enclosed in a thin blue border.

Fig 5: Checkout Page

CONCLUSION

The exercise successfully demonstrated the RAD model's application in UI design. Using Axure RP, an interactive Shopping App prototype was created with linked screens, interactive buttons, and a complete user flow from browsing products to checkout. The RAD model's iterative approach ensured that feedback was incorporated at each design phase, resulting in a functional and user-friendly interface prototype.
